## Projects

### Placement Portal | HTML, CSS, JavaScript, Python, Django, MySQL

January – April 2025

- The Placement Portal is a web-based application built to streamline the campus recruitment process. It allows students to register, browse job opportunities, apply for placements, and receive updates. Admins can post jobs, manage applications, and track placement statistics. Features include role-based access, company visit reports, student placement status, and skill-based event scheduling—making the placement process efficient and automated for both students and administrators.

### Calories Traker | Python, HTML, CSS, JavaScript, Django

March – May 2024

- The Calories Tracker System is a user-friendly web application designed to help users monitor and manage their daily calorie intake and expenditure. The system provides a platform for users to set fitness goals, log meals, track exercise activities, and receive actionable insights to maintain a healthy lifestyle.

### Doctor's Appointment System | Python, MySQL

October – December 2023

- The Doctors Appointment System is a web-based application developed using Python for backend logic and MySQL as the database to streamline the process of booking, managing, and tracking doctor appointments. This system ensures an efficient interaction between patients and doctors by providing an easy-to-use interface and real-time updates.
